

# A FRAMEWORK FOR DISCOVERING AND MANAGING PRODUCT COST RISKS

October 2, 2019

Bill Devenish – Global DFMA Leader and Producibility Engineer

Aaron Ulmer – Producibility Engineer

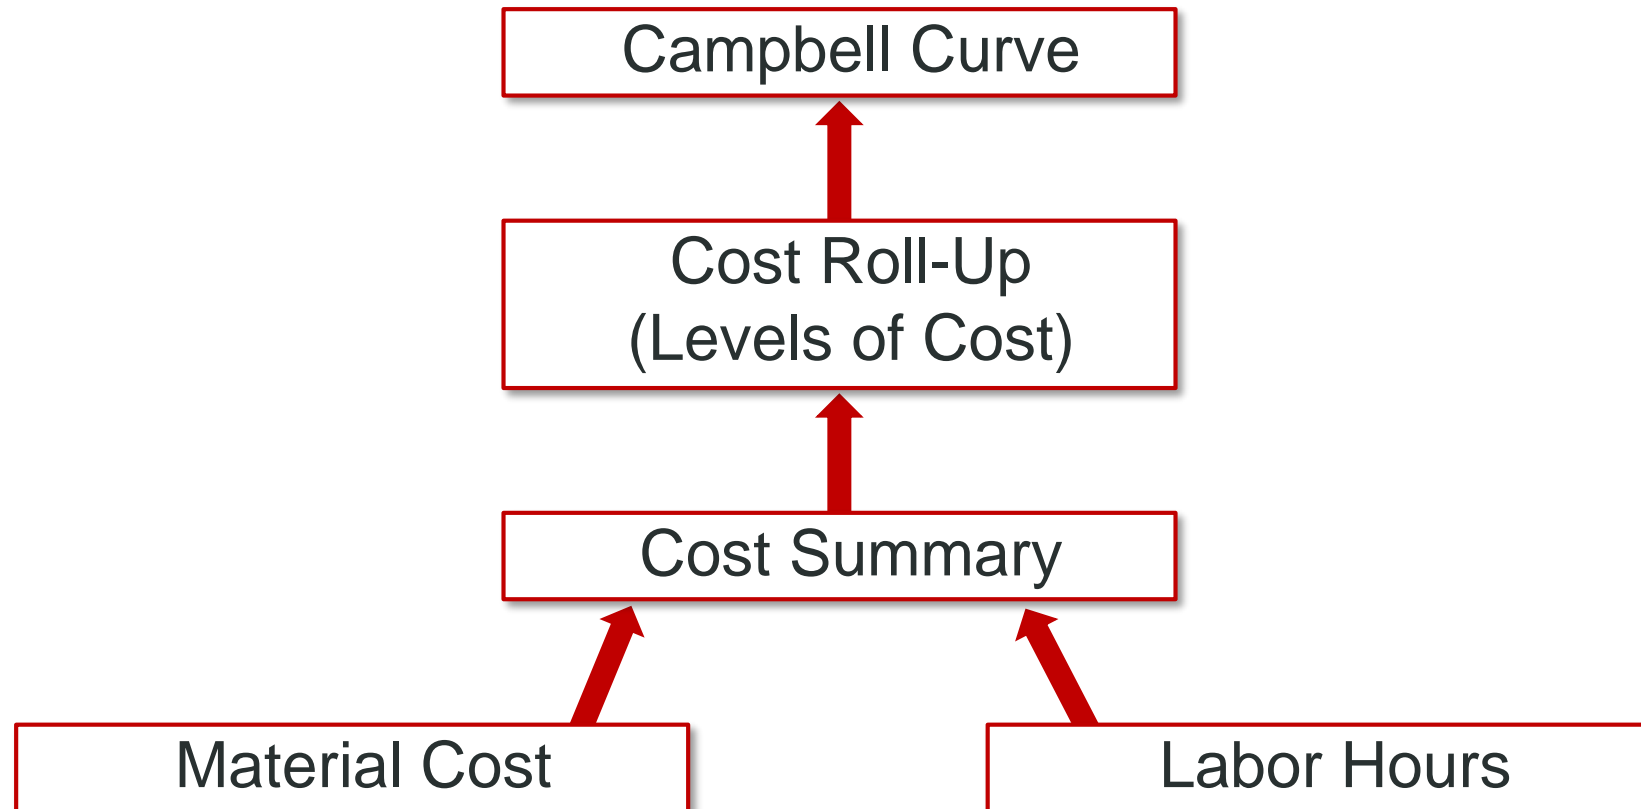

# Objective

---

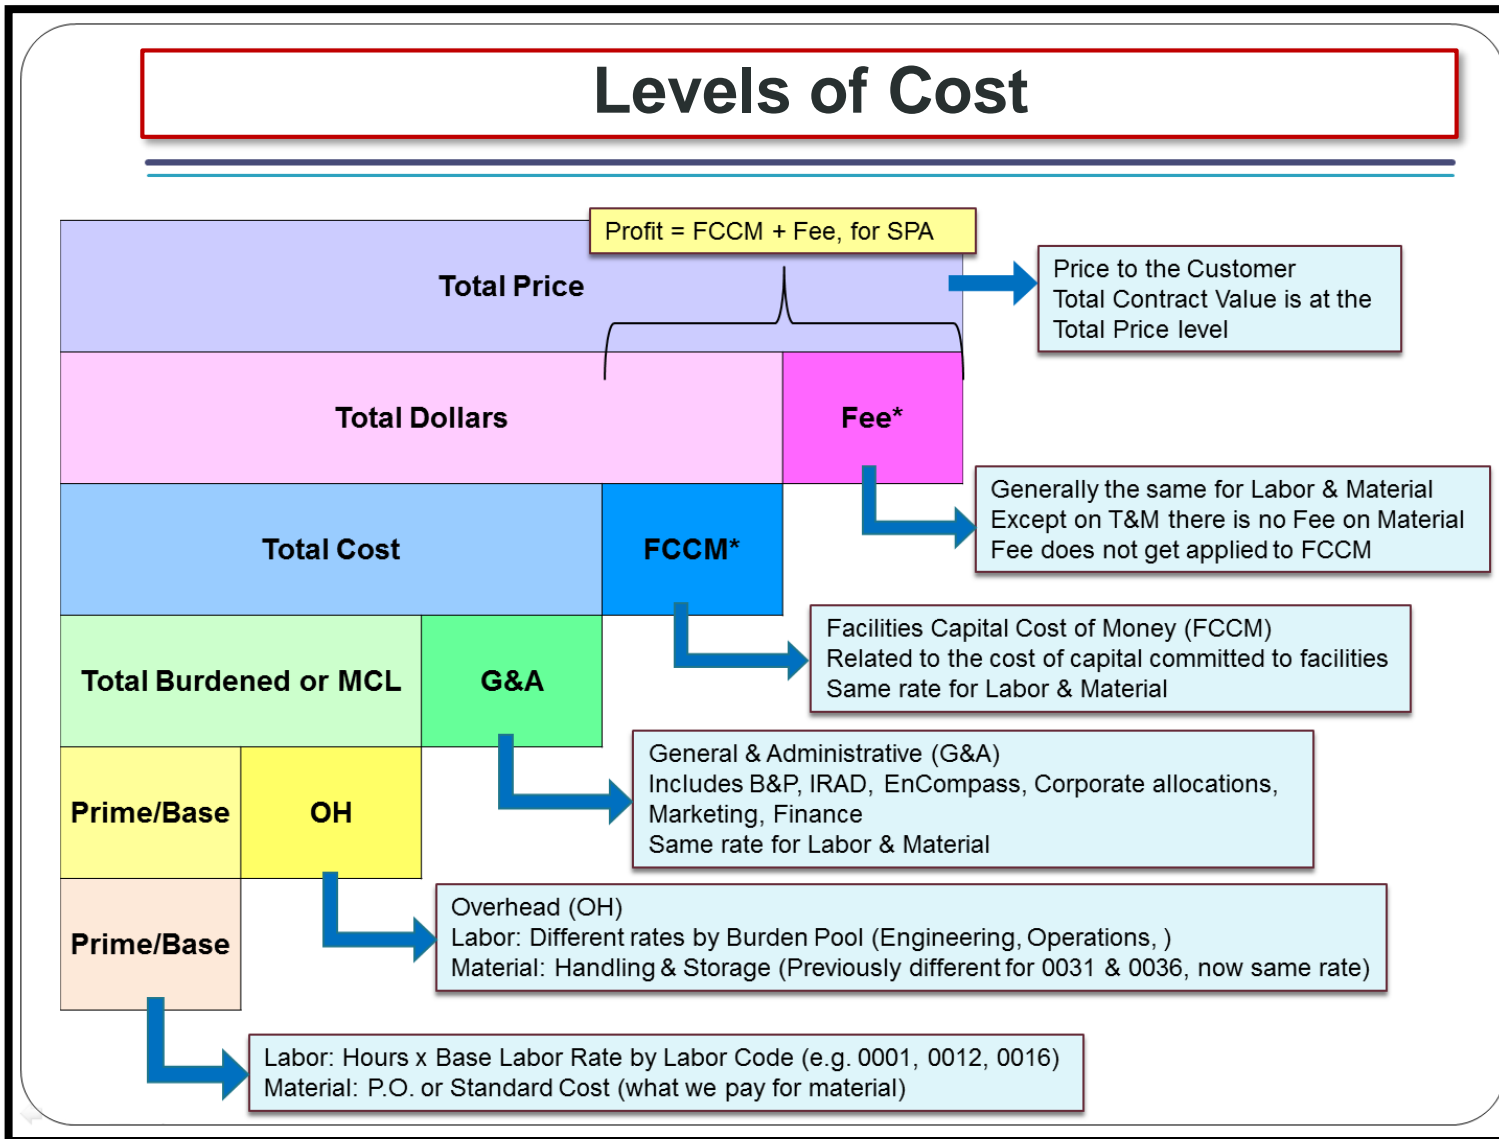

- Predict product costs with higher fidelity
- Uncover hidden organizational costs
- Reach customer price target by tracking material costs and labor hours

# Overview

---

# Cost Roll-Up: Levels of Cost

## Reveals Organizational Costs

- Uses historic Enterprise rate and fee data by department or function.
- Shows Cost Roll-up at each level.
- Socializes target tracking and ownership
  1. Challenge internal rates, fees.
  2. Set a target and calculate lower level allocation.
  3. Check if material and labor estimate meet target.

# Cost Summary: Baseline

Electronic Enclosure: Baseline		QTY	Material (\$)	Ext. Mat'l (\$)	Ext. Labor (sec)
				\$ 12.86	87.64
1	Housing	1	\$ 1.14	\$ 1.14	4.29
2	CCA	1	\$ 11.37	\$ 11.37	4.29
3	Cover	1	\$ 0.27	\$ 0.27	4.68
4	Screw, #4-40x.312	8	\$ 0.01	\$ 0.08	59.08
5	Part Mark	1	\$ -	\$ -	15.30

# Campbell Curve: Redesign #2

# Summary

---

- Use the highlighted tools and methods to **predict costs with higher fidelity**, as well as improve product costs with less investment
- Organizational Costs
  - Enterprise data reveals internal rates and fees by department and function
  - A 'Levels of Cost' calculator socializes target tracking with all who can improve cost drivers
- Design Costs
  - DFMA software highlights cost drivers and facilitates design improvement ideas

# Appendix: Definitions

---

- Core (Build): Overhead allocation to cover operations activities (i.e. OPM, OPE, LTE).
  - Core (Common): Overhead allocation to cover PMO (i.e. PM, Finance, Contract, Quality, CM/DM, PE, SE, Supplier Quality)
  - FCCM: Facilities Capital Cost of Money, which is the cost of capital committed to facilities.
  - Fee: Profit Margin percentage.
  - G&A: General and Administrative, which includes allocations for corporate, marketing and finance.
  - HCE: Hardware Cost Estimate.
  - MCL: Manufacturing Cost Line, which includes costs for material and labor with overhead applied.
  - MSO:
  - OH Labor: Overhead rate that accounting applies to the specified labor skill.
  - OH Material: Overhead rate that accounting applies to handling and storage of the material.
  - PO Cost: Standard cost, or the price that is paid for the material.
  - SPA: Sales and Profit Analysis.
-

# Appendix: Dimensions of Cost Risk

		* Activities are started chronologically; some are iterative.							
		Tools and Methods for Cost Discovery and Risk Mitigation							
	Development Cost Risk Areas	Similar-Product Analysis	Market Analysis baseline	Levels of Cost Calc.	Cost Field Tracker	Material, Labor Allo-cations	Cost vs. Func. Trades	BOM Cost Tracker	DFMA Eval w/ Ops, 3P
